

# CPD Seminar

## Access All Areas

The new CPD from Bilco "Access All Areas" covers the full range of access products from roof access hatches to floor doors and also looks at the use of smoke vents, ladders and safety products. It looks at the most appropriate solutions for access requirements and examines what considerations should be made when specifying these for a project.

Following the introduction of Bilco Assist (an online aid to selecting the right access solution), the CPD looks at the key types of access required and explores the most cost effective and safest options to meet these. The CPD will also discuss smoke vents (which can also be used for access) and the various control options for these, in addition to looking at the various design considerations when specifying these for a project.

The CPD gives an overview of roof and floor access solutions, and whilst not being overly technical, is intended to give the audience a good understanding of what needs to be taken into consideration when specifying access. It is ideal for Architects, Facility Managers, Project Managers, in fact, for anyone who is involved in the specification, selection or procurement of access products.

### Brief outline of CPD content:

- Purpose/Reason For Access
- Frequency of Access
- Safe Operation
- The Correct Ladder
- Smoke Vents & CE Marking
- Relevant Regulations & Standards

To arrange a CPD Seminar at your premises, please contact:
