

# Horrods

70 years of engineering excellence

## Adapting, and improving.

### The SwiftMelt - *the most efficient asphalt mixer.*

This Thermostatically Controlled machine has been improved since its design in the 1980s.

The efficiency is an amalgamation of a broad heating surface, combined with the agitation of the materials within. The even heating means the materials will always be at optimum level for laying, and the more specialised materials are moderated by the thermostat control.

Horrods also offer machine servicing and operator training.
