

Having attended the Bilco CPD "Access all Areas", you should now have a better understanding of the following:

- How to design safe access to the roof
- Which type of ladders or stairways are the most appropriate for different hatches and access requirements
- How to move around the roof safely, navigate obstructions, and how to create a safe escape route
- The connections between hatches, ladders and the roof systems
- Natural smoke ventilation systems and their potential for use as either access or ventilation
- Floor door specification and the right questions to be asked to allow you to specify correctly

For useful guidance on how to specify the right product for a given project, visit www.bilcok.com and click on the Bilco Assist logo for help.
